VOL. 51

OCTOBER 23, 1936

No. 43

CURRENT PREVALENCE OF COMMUNICABLE DISEASES IN THE UNITED STATES¹

September 6–October 3, 1936

Poliomyelitis.—The number of reported cases of poliomyelitis rose from 626 for the 4 weeks ended September 5 to 1,027 for the current 4-week period. States in which the disease has been considerably above the seasonal expectancy were as follows: Illinois, 245 cases; Ohio, 102; Tennessee, 85; California, 54; Alabama and Georgia, 40 each; Colorado, 29; Mississippi, 18; and Maine, 11. More than 60 percent of the total cases occurred in these 9 States. Other States reported about the normal seasonal incidence.

For the country as a whole the current incidence was about 40 percent of that for the corresponding period in 1935 and slightly above the average for the 3 preceding years. The incidence since the first of the year and the trend during recent weeks, along with comparative figures for preceding years, are given in the accompanying table.

In Alabama the peak seems to have been passed, but in Tennessee the number of cases is still high. In Illinois, Ohio, and other North Central States more cases were reported during the last few weeks than at any other time this year.

An epidemic in 1935 that started in North Carolina was rather generally felt in the northern States of the South Atlantic region and in all States in the North Atlantic region. The first significant rise for this season was reported from the South Central States; the other States reporting a high incidence are quite widely scattered over the various sections of the country. In 1934 the disease was epidemic in California and the West. While the peak of that outbreak occurred earlier in the summer, the number of cases continued on a relatively high level until late in October.

*Influenza.*²—The number of cases of influenza reported for the 4 weeks ended October 3 was 1,225. For the corresponding period in the years 1935, 1934, and 1933 the cases numbered 1,956, 1,777, and 2,137, respectively. Practically every section of the country reported

¹ From the Office of Statistical Investigations, U. S. Public Health Service. These summaries include only the 8 important communicable diseases for which the Public Health Service receives weekly telegraphic reports from the State health officers. The numbers of States included for the various diseases are as follows: Typhoid fever, 48; poliomyelitis, 48; meningococcus meningitis, 48; smallpox, 48; measles, 47; diphtheria, 48; scarlet fever, 48; influenza, 44 States and New York City. The District of Columbia is counted as a State in these reports.

² See Influenza Mortality in the United States, 1936, by Mary Gover. Public Health Reports, Oct. 9, 1936, p. 1399.

a slight increase over the preceding 4-week period, but an increase of influenza cases is normally expected at this season of the year, and there was no indication of anything more than a normal increase. The Mountain and Pacific regions reported a very slight increase over last year; the North Atlantic regions reported approximately the same incidence, and in all other regions the disease was considerably less prevalent than at this time last year.

Poliomyelitis cases reported in each State during recent weeks of 1936

¹ Nevada excluded; no data.

Typhoid fever.—The number of cases of typhoid fever (2,340) for the country as a whole was the lowest reported for this period in the 8 years for which these data are available, and this low prevalence obtained in each geographic region. In the North Central, South Atlantic, and Mountain and Pacific regions the current incidence was only slightly below the level of last year, but the North Atlantic and South Central regions reported more than 15-percent decreases.

Scarlet fever.—An increase of scarlet fever is normally expected at this season of the year. The number of reported cases for the 4 weeks ended October 3 was 5,215, as against 3,472 for the preceding 4-week period. In relation to recent years the current incidence was low, approximately 8,000 cases being reported for this period in each of the 4 preceding years. The seasonal increase was apparent in all sections of the country, but the current figures for each geographic region were considerably below those for the corresponding periods in recent years.

Smallpox.—The incidence of smallpox has about returned to the normal seasonal level. For the current 4-week period there were 123 cases reported, as compared with 109, 102, 131, and 130 for the corresponding period in the 4 preceding years. Montana reported 26 cases, South Dakota 20, and Illinois 19; but in other States in the Western and North Central regions, where the disease has been unusually prevalent, the incidence dropped to about normal expectancy. Atlantic Coast and South Central regions reported a very low incidence.

Measles.—The incidence of measles was relatively low, the number of cases for the current period being 1,183 as compared with 2,306, 3,031, and 2,026 for the corresponding period in the years 1935, 1934, and 1933, respectively. Each geographic region shared in the favorable situation that now exists after the unusually high incidence of measles that prevailed during 1935 and 1934.

Diphtheria.—Diphtheria continued at a very favorable level. For the 4 weeks ended October 3 the number of cases reported was 2,248 as compared with 3,821, 3,566, and 4,830 for the corresponding period in the years 1935, 1934, and 1933, respectively. Among the various geographic regions the decreases from last year's figures for this period ranged from 15 percent in the South Atlantic region to more than 70 percent in the West North Central region.

Meningococcus meningitis.—For the country as a whole the number of cases (237) of meningococcus meningitis was practically on a level with that reported for the corresponding period in 1935, but it was considerably above the numbers for the 3 preceding years, when the cases reported for this period numbered 135, 130, and 179, respectively. The East North Central, South Atlantic, and South Central regions reported slight increases over last year; in other regions the disease

was less prevalent. Of the total number of cases more than 60 percent were reported from the following States: New York, 24; Kentucky, 22; Illinois, 16; Tennessee and Pennsylvania, 14 each; Maryland and Ohio, 13 each; Virginia, West Virginia, and South Carolina, 11 each. The remaining cases were widely distributed among the other States.

Mortality, all causes.—The average mortality rate for large cities for the 4 weeks ended October 3 as reported by the Bureau of the Census was 10.0 per thousand population (annual basis). The rates for the corresponding periods in 1935, 1934, and 1933 were 10.0, 9.9, and 9.8, respectively.

REVIEW OF PLAGUE IN SEATTLE IN 1907 AND SUBSEQUENT RAT AND FLEA SURVEYS

The Public Health Service has recently published a review of an outbreak of human plague which occurred in Seattle nearly 30 years ago and the measures which have been undertaken since that time in the investigation and eradication of the infection.¹

The purpose of this review was to collect and preserve data dealing with the original outbreak of plague and the measures enforced in eradicating it, to give a history of rodent plague in Seattle, to report the activities of the Seattle rat laboratory, and to give the results of various flea surveys.

Three cases of human plague occurred in Seattle late in October 1907—one bubonic and two of the pneumonic type. Three other deaths occurred in Seattle at that time presenting symptoms of pneumonic plague, although they were not diagnosed as such. Two of these cases occurred in the family in which the known cases of pneumonic plague occurred, and one case was probably the source of infection for three female members of his family. No other case of human plague was discovered, although rodent plague continued for 10 years within the city.

Two campaigns for the eradication of plague were conducted in Seattle, both under the direction of the United States Public Health Service. The first campaign was undertaken on the discovery of plague cases in October 1907 and was continued for only a few months. The second campaign followed the discovery of a greatly increased number of plague-infected rats in 1913 and was continued for 3 years through the efforts of a Public Health Service officer, Dr. B. J. Lloyd. These campaigns accomplished much in improving sanitary conditions along the water front and in the business district of the city, but the author is of the opinion that a low *cheopis* index, together with extensive regrading and rebuilding, were factors of importance in the elimination of rodent plague.

¹ Review of Plague in Seattle (1907) and Subsequent Rat and Flea Surveys. By L. D. Fricks, medical director. Public Health Bulletin No. 232. Government Printing Office, Washington, 1936.

Rodent plague persisted in Seattle for at least 10 years, November 1907 to March 1917, during which time 84 plague-infected rats were discovered, 54 of these being found in 1913 and 1914.

A rat laboratory was maintained in Seattle by the Public Health Service and the city health department for nearly 26 years, November 1907 to June 30, 1933. A continuous sampling of the rat population was carried on in which approximately 500,000 rats were examined for plague infection.

Detached observations of rat-flea prevalence were first undertaken in 1908 and two flea surveys were made. All the information gathered on this subject goes to show a low *cheopis* index. In the last survey extending from January 1930 to April 1932 the *cheopis* index was 0.4 plus.

The author concludes that, while conditions are unfavorable for the spread of bubonic plague in Seattle at the present time, the same cannot be said for pneumonic plague. Therefore every precaution should be taken to prevent the reintroduction of the infection.

THE EFFECT OF VIBRION SEPTIQUE TOXIN ON ANIMALS

The anaerobe *Vibrio septique* produces a specific toxin which brings about striking results when inoculated intravenously into laboratory animals, particularly rabbits. It is almost unique in the rapidity of its action on this animal. The period of incubation is almost nonexistent in some cases or so short that the question has been raised whether the action is that of a true toxin. The effects produced may, however, be prevented by neutralization with an antitoxin.

An experimental study was made dealing with (1) the relation of the amount of toxin administered to the length of survival of animals, (2) the action of the toxin, (3) the action of the toxin by routes other than the intravenous route, and (4) a detailed histopathologic study of its pathologic action in rabbits, guinea pigs, mice, and pigeons. The report on this study has recently been published by the Public Health Service.¹

The study shows rather conclusively that the toxin of *Vibrio septique* has powerful cardiotoxic properties, if not an especial affinity for the heart. In this organ, hydropic, granular, and colloid droplet degeneration of smaller or larger groups of muscle fibers were seen in all stages of the intoxication. Zenker's necrosis was the essential and most important lesion, and it was found in some degree in practically all animals. It is probably the cause of death and the explanation for the recorded pathologic physiology.

¹ The Experimental Pathology and Pathologic Histology Produced by the Toxin of *Vibrio Septique* in Animals. By Joseph G. Pasternack and Ida A. Bengtson. National Institute of Health Bull. No. 168. Government Printing Office, Washington, 1936.

In the literature there is no mention of the nephrotoxic properties of the specific toxin of *Vibrio septique*. Intravenous inoculations produce lesions quickly and rather regularly in rabbits, mice, guinea pigs, and pigeons. The kidneys exhibited all grades of colloid droplet degeneration and necrosis of the labyrinthine tubules. The glomerular tufts showed various stages of thrombosis and thrombonecrosis, and characteristic glomerular blood cyst formation.

The other organs showed degenerative lesions of variable degree, but generally of less severity than the lesions produced in the heart and kidneys, and with much less regularity.

The observations recorded disclose certain facts that appear to be important in understanding the pathologic physiology of acute, fatal "gas" gangrene in man, in which this organism is an agent.

DEATHS DURING WEEK ENDED OCT. 3, 1936

[From the Weekly Health Index, issued by the Bureau of the Census, Department of Commerce]

	Week ended Oct. 3, 1936	Correspond- ing week, 1935
Data from 86 large cities of the United States:		
Total deaths.....	7,285	7,252
Deaths per 1,000 population, annual basis.....	10.2	10.1
Deaths under 1 year of age.....	556	466
Deaths under 1 year of age per 1,000 estimated live births.....	60	43
Deaths per 1,000 population, annual basis, first 40 weeks of year.....	12.2	11.4
Data from industrial insurance companies:		
Policies in force.....	68,530,210	67,681,475
Number of death claims.....	11,114	10,858
Death claims per 1,000 policies in force, annual rate.....	8.4	8.4
Death claims per 1,000 policies, first 40 weeks of year, annual rate.....	10.0	9.7

STATE AND INSULAR HEALTH AUTHORITIES, 1936

DIRECTORY, WITH DATA AS TO APPROPRIATIONS AND PUBLICATIONS

Directories of the State and insular health authorities of the United States for each year from 1912 to 1935, except 1932, have been published in the PUBLIC HEALTH REPORTS and reprinted as separates¹ for the information of health officers and others interested in public-health activities. The present directory (1936), like those previously issued, has been compiled from information furnished by the respective State and insular health officers and includes data as to appropriations and publications.

Where an officer has been reported to be a "whole-time" health officer, that fact is indicated by an asterisk (*). For this purpose a "whole-time" health officer is defined as "one who does not engage in the practice of medicine or in any other business but devotes all of his time to official duties."

¹ Reprints nos. 83, 123, 190, 208, 344, 405, 488, 544, 603, 706, 775, 871, 949, 1043, 1106, 1188, 1254, 1334, 1438, 1522, 1604, 1675, and 1724, from the PUBLIC HEALTH REPORTS.

ALABAMA DEPARTMENT OF PUBLIC HEALTH

Board of censors of the medical association of the State of Alabama, acting as a State committee of public health:

- Bibb Graves, governor, ex officio chairman, Montgomery.
- E. V. Caldwell, M. D., chairman, Huntsville.
- M. Y. Dabney, M. D., Birmingham.
- M. S. Davie, M. D., Dothan.
- S. A. Gordon, M. D., Marion.
- Fred W. Wilkerson, M. D., Montgomery.
- J. D. Perdue, M. D., Mobile.
- W. D. Partlow, M. D., Tuscaloosa.
- Walter F. Scott, M. D., Birmingham.
- K. A. Mayer, M. D., Lower Peach Tree.
- T. Brannon Hubbard, M. D., Montgomery.

Bureau of administration:

- Executive health officer:
*J. N. Baker, M. D., State health officer, Montgomery.
- *Bessie A. Tucker, secretary to State health officer, Montgomery.
- *G. S. Savage, financial secretary, Montgomery.

Bureau of county organization:

- *Douglas L. Cannon, M. D., director, Montgomery.
- *J. S. Hough, M. D., field adviser in county organization, Montgomery.
- *A. M. Shelamer, M. D., field adviser in county organization, Montgomery.

Bureau of communicable disease control:

- *D. G. Gill, M. D., D. P. H., director, Montgomery.
- *W. H. Y. Smith, M. D., C. P. H., assistant director, Montgomery.
- *R. A. Brown, M. D., clinician, Montgomery.
- *K. N. Joseph, M. D., clinician, Montgomery.
- *Myrtle Martin, R. N., Montgomery.
- *Mary S. Pugh, R. N., Montgomery.

Bureau of hygiene and nursing:

- *B. F. Austin, M. D., director, Montgomery.
- *J. J. Repa, M. D., pediatrician, Montgomery.
- *Sarah Brooks, R. N., Montgomery.
- *Gladys Prestwood, R. N., Montgomery.
- *Maude Pick, R. N., Montgomery.
- *Margaret Murphy, R. N., Montgomery.
- *Mary Lee Morris, R. N., Montgomery.

Bureau of laboratories:

- *James G. McAlpine, Ph. D., general director, Montgomery.
- Anniston branch:
*Mary Walker, Anniston.
- Birmingham branch:
*George A. Denison, M. D., Birmingham.
- Dothan branch:
*Nellie K. Whitfield, Dothan.
- Huntsville branch:
*Mrs. Buford Gatlin, Huntsville.
- Mobile branch:
*C. H. Walte, Mobile.
- Tennessee Valley branch:
*C. C. Johnson, Decatur.
- Tuscaloosa branch:
*Cannie Campbell, Tuscaloosa.
- Selma branch:
*Cooper Brougher, Selma.

Bureau of sanitation:

- *G. H. Hazlehurst, M. C. E., director, Montgomery.

Assistant engineers:

- *T. H. Milford, B. S. in C. E., M. S. in San. E., Montgomery.
- *Frank B. Wood, B. S. in C. E., Montgomery.
- *A. N. Beck, B. S. in C. E., Montgomery.
- *R. V. Barnes, B. S. in C. E., Montgomery.
- *J. C. Clarke, B. S. in C. E., Montgomery.
- *O. G. Quenelle, M. S. in M. E., Montgomery.

Division of inspection:

- *C. A. Abele, Ch. E., director, Montgomery.
- *H. J. Thrasher, Huntsville.
- *F. H. Downs, B. S. in D. H., Montgomery.

Bureau of vital statistics:

- *Leonard V. Phelps, director and registrar, Montgomery.

Appropriation for fiscal year ending September 30, 1936:

- Annual appropriation for all health work, including county organization, \$400,000. (Subject to proration on basis of available revenue coming into the general fund. This makes amount indeterminate.)

ALASKA DEPARTMENT OF HEALTH

Executive health officer:

- Walter W. Council, M. D., commissioner of health, Juneau.

Assistant commissioners of health:

- A. D. Haverstock, M. D., Seward.
- Rex F. Swartz, M. D., Nome.
- Floyd B. Gillespie, M. D., Fairbanks.

Appropriation for 1935-37, \$15,200.

ARIZONA STATE BOARD OF HEALTH

State board of health:

- B. B. Moour, Governor, president, Phoenix.
- John L. Sullivan, vice president, Phoenix.
- George C. Truman, superintendent, secretary, Phoenix.

- F. E. Doucette, secretary, business manager, Phoenix.
- Fred Ruppellus, statistician, Phoenix.
- Ralph Thomas, assistant secretary and auditor, Phoenix.

Executive health officer:

- George C. Truman, M. D., State superintendent of health, Phoenix.

State laboratory:

- *Robert A. Greens, director, Tucson.
- *Marion Stroud, bacteriologist, Phoenix.
- *W. B. West, assistant bacteriologist, Tucson.

Division of local health administration:

- *George A. Hays, M. D.

Sanitary engineer:

- *F. C. Roberts.

County health units:

- *A. N. Crain, M. D., medical director, Maricopa County, Phoenix.
- *R. B. Durfee, M. D., medical director, Cochise County, Bisbee.
- *Lewis H. Howard, M. D., medical director, Pima County, Tucson.
- *G. F. Manning, M. D., medical director, Gila County, Globe.
- Jack B. Eason, M. D., medical director, Yuma County, Yuma.

Appropriations, year ending June 30, 1937:

Board of health.....	\$15,705
Child hygiene.....	19,700
State laboratory.....	9,140

ARKANSAS STATE BOARD OF HEALTH

Board of health:

- W. H. Hodges, M. D., president, Malvern.
- Thomas Wilson, M. D., Wynne.
- J. G. Gladden, M. D., Harrison.
- E. D. McKnight, M. D., Brinkley.
- L. D. Duncan, M. D., Waldron.
- F. O. Mahony, M. D., El Dorado.

Executive health officer:

- Wm. B. Grayson, M. D., State health officer, Little Rock.

Bureau of vital statistics:

- *Mrs. J. B. Collie, statistician, Little Rock.
- *Reuben McClure, field agent, Little Rock.

Hygienic laboratory:

- *H. V. Stewart, associate director, Little Rock.
- *Mildred M. Moss, bacteriologist, Little Rock.
- *Mildred S. Fatherree, M. D., bacteriologist, Little Rock.

Bureau of sanitary engineering:

- *M. Z. Bair, C. E., chief sanitary engineer, Little Rock.

Bureau of sanitary engineering—Continued.

*Leon McDonald, assistant engineer, Little Rock.

*James P. Slater, assistant State director, malaria-sanitation, Little Rock.

*D. Webster Jones, B. S. A., director, milk control, Little Rock.

Bureau of local health service:

*Gordon Hastings, M. D., M. P. H., assistant State health officer, director, Little Rock.

*T. T. Ross, M. D., M. P. H., director, division of maternal and child health, Little Rock.

*Margaret S. Vaughan, R. N., supervisor, public health nursing, Little Rock.

*Matie Neely, R. N., chief consultant nurse, division of maternal and child health, Little Rock.

*Gale Morris, accountant.

Training center, Morrilton, Arkansas:

*W. Myers Smith, M. D., M. P. H., director.

*W. P. Scarlett, M. D., M. P. H., assistant director.

Bureau of communicable diseases:

Appointments pending—director and epidemiologist.

Appropriations for biennial period ending

June 30, 1937:

Executive salary and miscellaneous..... \$10,800

Bureau of vital statistics..... \$29,800

Registrars' fees..... 30,000

59,800

Bureau of sanitary engineering..... 19,000

Hygienic laboratory..... 18,600

Bureau of local health service..... 170,000

CALIFORNIA DEPARTMENT OF PUBLIC HEALTH

Board of public health:

Howard Morrow, M. D., president, San Francisco.

Edward M. Pallette, M. D., vice president, Los Angeles.

Walter M. Dickie, M. D., director of public health, Sacramento.

Gifford L. Sobey, M. D., Paso Robles.

William R. P. Clark, M. D., San Francisco.

George H. Kress, M. D., Los Angeles.

Gustave Wilson, M. D., Sacramento.

Department of public health:

*Walter M. Dickie, M. D., director of public health, Sacramento.

District health officer:

*Gavin Telfer, M. D., southern division.

Bureau of epidemiology:

*Harlin L. Wynns, M. D., chief, San Francisco.

*Ida May Stevens, supervising morbidity statistician.

Bureau of sanitary inspections:

*Edward T. Ross, chief, Sacramento.

Bureau of vital statistics:

*Marie B. Stringer, chief, Sacramento.

WEEKLY REPORTS FROM CITIES

City reports for week ended Oct. 3, 1936

This table summarizes the reports received weekly from a selected list of 140 cities for the purpose of showing a cross section of the current urban incidence of the communicable diseases listed in the table. Weekly reports are received from about 700 cities, from which the data are tabulated and filed for reference.

FOREIGN AND INSULAR

BELGIUM

Vital statistics—1935.—The following table shows vital statistics for Belgium for 1935:

Population.....	8,299,940	Number of deaths.....	106,226
Number of live births.....	127,405	Death rate per 1,000 population.....	12.8
Birth rate per 1,000 population.....	15.35	Number of marriages.....	63,160
Number of stillbirths.....	4,182		

CANADA

Manitoba—Poliomyelitis.—During the week ended October 10, 1936, 56 new cases of poliomyelitis were reported in the Province of Manitoba, Canada, making a total of 345 cases reported in the province since June 20, 1936. Six cases of poliomyelitis were reported in Winnipeg during the week ended October 10, 1936.

Vital statistics—First quarter 1936.—The Bureau of Statistics of the Dominion of Canada has published the following preliminary statistics for the first quarter of 1936. The rates are computed on an annual basis. There were 19.7 live births per 1,000 population during the first quarter of 1936 and 20.1 per 1,000 population in the same quarter of 1935. The death rate was 10.2 per 1,000 population for the first quarter of 1936 and 10.7 per 1,000 population for the first quarter of 1935. The infant mortality rate for the first quarter of 1936 was 70 per 1,000 live births and 83 in the corresponding quarter of 1935. The maternal death rate was 6.2 per 1,000 live births for the first quarter of 1936 and 5.9 for the same quarter of 1935.

The accompanying tables give the numbers of births, deaths, and marriages by Provinces for the first quarter of 1936, and deaths from certain causes in Canada for the first quarter of 1936, and the corresponding quarter of 1935, and by Provinces for the first quarter of 1936.

SCOTLAND

Vital statistics—1935.—Following are vital statistics for Scotland for the year 1935:

Number of marriages.....	37,997	Deaths per 1,000 population.....	13.19
Number of births.....	87,928	Infant mortality per 1,000 births.....	76.8
Births per 1,000 population.....	17.75	Maternal mortality per 1,000 births.....	6.8
Number of deaths.....	65,331		

CHOLERA, PLAGUE, SMALLPOX, TYPHUS FEVER, AND YELLOW FEVER

NOTE.—A table giving current information of the world prevalence of quarantinable diseases appeared in the PUBLIC HEALTH REPORTS for September 25, 1936, pages 1348-1361. A similar cumulative table will appear in the PUBLIC HEALTH REPORTS to be issued October 30, 1936, and thereafter, at least for the time being, in the issue published on the last Friday of each month.

Cholera

Afghanistan—Zurmat Province.—On October 8, 1936, cholera was reported present in Zurmat Province, Afghanistan.

Plague

Ecuador—Alausi.—During the period September 1-15, 1936, 1 case of plague with 1 death was reported in Alausi, Ecuador.

Egypt—Beheira Province.—One fatal case of plague was reported in Beheira Province, Egypt, on October 3, 1936.

Hawaii Territory—Hawaii Island—Hamakua District—Paauhau Sector.—A rat found October 8, 1936, in Paauhau Sector, Hamakua District, Island of Hawaii, Hawaii Territory, has been proved plague infected.

Smallpox

Mexico.—During the month of July 1936, smallpox has been reported in Mexico as follows: Mexico, D. F., 12 cases, 1 death; Queretaro, Queretaro State, 1 case.

Typhus Fever

Mexico.—During the month of July 1936, typhus fever has been reported in Mexico as follows: Aguascalientes, Aguascalientes State, 1 death; Guadalajara, Jalisco State, 1 case; Mexico, D. F., 23 cases, 9 deaths; Mexico State, 3 cases, 2 deaths; San Luis Potosi, San Luis Potosi State, 3 cases, 1 death; Sinaloa State, 1 death.

Yellow Fever
